**Subject:** missing 1997 test result  
**Attachments:** KVD - 4-4-97 test result.docx; KVD - 2004 summary of WW24-25 from EPA.pdf; KVD - 2004 summary of WW24-25 (1997-2003).pdf; KVD - 1999+report+cover+page.pdf; KVD -1999+report+-W20 tested.pdf; URI - 1999 report -W20 chart & graphs.pdf; URI - 1999 report -W20 chart & graphs.pdf

Mr. Torres:

In 2004, you were provided test results of the Garcia wells as well as a chart. Those results were dated beginning Dec. 1996 and went through 2003 or 2004. The attached result dated 4/4/97 was not included.

In URI's 2004 summary the 4/4/97 result is listed as the first test of WW24-25; the Dec. 1996 result was not included.

It is also interesting that in its 1999 report, those same values were attributed to WW20.

Therefore, I believe that the uranium concentration is not particularly significant (it is similar to other results from that time period) but the fact that in 1999 URI listed it as the initial result for WW20 and then in 2004 listed it as the initial test result for WW24-25 is significant, and that it was missing from the results you were provided.

It is also interesting that in its 1999 report, those same values were attributed to WW20.

I have attached portions of both the 1999 and 2004 environmental reports; in the attachment named KVD - 1999+report+W20 tested.pdf please see the second full paragraph.
